Visual Reference for Developer Instance:

1. **Layout Strategy:** The UI is divided into 3 "Panels" using CSS Grid.
   - *Panel 1 (Top Left):* **"The News"**. White background, jagged black border (clip-path). Contains the Gemini-generated headline.
   - *Panel 2 (Middle Right):* **"The Advisor"**. Halftone background (CSS radial-gradient). Contains the character avatar (Vic or Sal) and their "Bonmot" speech bubble.
   - *Panel 3 (Bottom):* **"The Action"**. Black background. Two massive buttons: "YOLO" (Green text) and "FOLD" (Red text).

2. **CSS Halftone Code (Use this):**

```
.manga-bg {
background-image: radial-gradient(#000 20%, transparent 20%), radial-gradient(#000
20%, transparent 20%);
background-color: #fff;
background-position: 0 0, 5px 5px;
background-size: 10px 10px;
opacity: 0.1;
}
```

3. **Character Logic:**
   - Do not try to generate complex AI images on the fly (too slow/expensive).
   - Use **Silhouette Avatars**: Pre-defined SVG paths for "Man in Suit" (Vic) and "Old Man with Hat" (Sal). Change their color (Red/Green) based on the market mood.
